

# Full-Stack Virtual Health

## About Us

cliexa® is a software platform designed to facilitate health care services through the use of remote, mobile technologies and maximize clinical efficiency.

Through a secure, mobile platform, cliexa enables physicians and admins leverage integrated data to learn more about your patients and deliver tools to optimize your delivery of care.

## Features

### Digital Intake & Registration

Patients complete registration and intake remotely including consent forms, custom screeners, medical history, & more.

### Revenue Cycle Management

With automated billing code qualification and documentation, providers can save time and money from the standard paper process.

### Clinical Support

Address patient need across your patient population while enhancing clinical workflows and billing practices.

### Analytics & Reporting

Integrated documentation for audit protection and compliance through customizable built-in surveys and questionnaires that quickly categorize the visit.

### EMR Integration

Integrate the system to any EMR and save time on documentation with discrete data delivery, and real-time reporting.

### RPM & Telehealth Support

Patients track their health status remotely and connect wearable devices to gather quantifiable data, and enable custom telehealth flows.
