Streamline documentation, data collection, analysis, and real-time monitoring of patients with chronic disease.

The Continuum of Care

Healthcare providers now face increasing pressure to get documentation right while delivering quality patient care. This shift creates a need for a cross-communication platform like cliexa, to foster collaboration between **patients**, **providers**, **payers**, and **key stakeholders involved in the healthcare system** in order to quantify and qualify patient-reported outcomes (PRO). This data assists providers by responding more efficiently to changes in baseline metrics, so their patients will have a more targeted and timely treatment, potentially resulting in fewer complications.

How Does cliexa® Work?

cliexa® aims to **improve quality of care, clinical workflow, income generation, time spent with patients and reduce liability concerns**. This is achieved through the utilization of patient-reported outcomes and implementing customized intake, screening, and remote monitoring tools that fit their clinical setting.

Why should I use cliexa®?

Physicians need an **automated process that can quickly categorize the nature of the visit**, which is offered in the cliexa platform with our coding compliance programming. cliexa brings increased efficiency to your practice by:

- Streamlining documentation via EMR integration for audit protection and compliance
- Allowing customizable built-in surveys and questionnaires to improve your MIPS score
- Improving physician-patient communication

> *"With the transition to a digital patient intake... Our patients have spent less time in the waiting room with more time delegated to their doctor visit. "*
