cliexa

Enable Remote Care & Virtual Health
with cliexa

Get paid to provide remote and virtual care services and unleash the power of patient-reported data.

Highly customizable tools deployed directly from your EMR or cloud network.
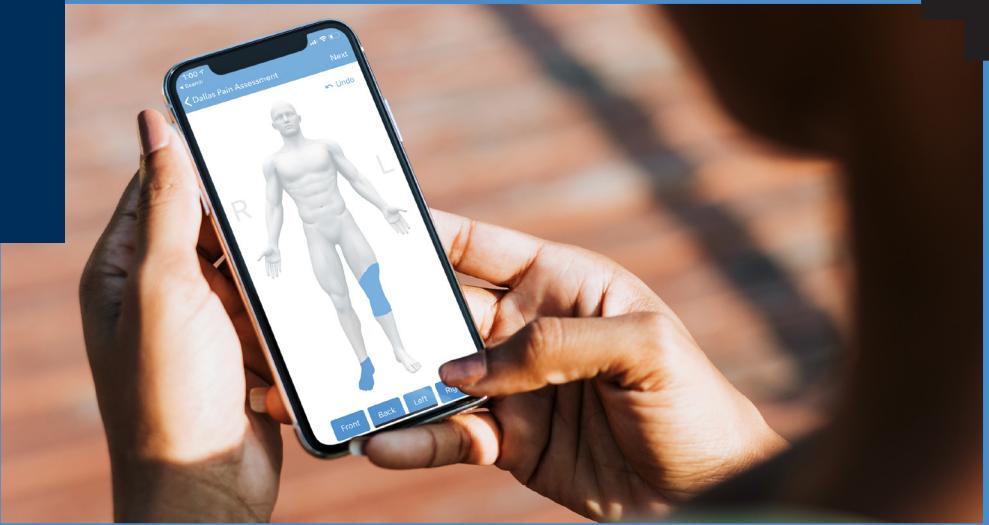

Use this guide to understand how the platform works within the athenahealth EMR.

"More opportunities to help our patients than we had envisioned... patients spent less time in the waiting room with more time delegated to their doctor visit."

Erik Seyler, CEO
Anderson Medical Center

Overview

What is cliexa?

cliexa® is a software platform designed to facilitate health care services through the use of remote, mobile technologies and maximize clinical efficiency.

Through a secure, mobile platform, cliexa enables physicians and admins leverage integrated data to learn more about your patients and deliver tools to optimize your delivery of care.

Remote patient monitoring, home care and telehealth have been gaining traction in healthcare as a means to provide enhanced care to patients, while also trying to reduce costs. Our tools support the full care continuum remotely from before, during, and after patient visits, to in-between.

Use cliexa to ensure efficient and robust data collection so as to address patient need across your patient population while enhancing clinical workflows and billing practices.

How does it work?

Rather than patients traveling to their local healthcare setting, the entire registration process can now be completed remotely.

Patients will complete all registration information on a smartphone or tablet from the comfort of their homes or in the waiting room. The information discretely populates the appropriate fields and buckets in athenahealth for the medical staff.

Some of the fields that can be delivered remotely and integrated into the EMR include:
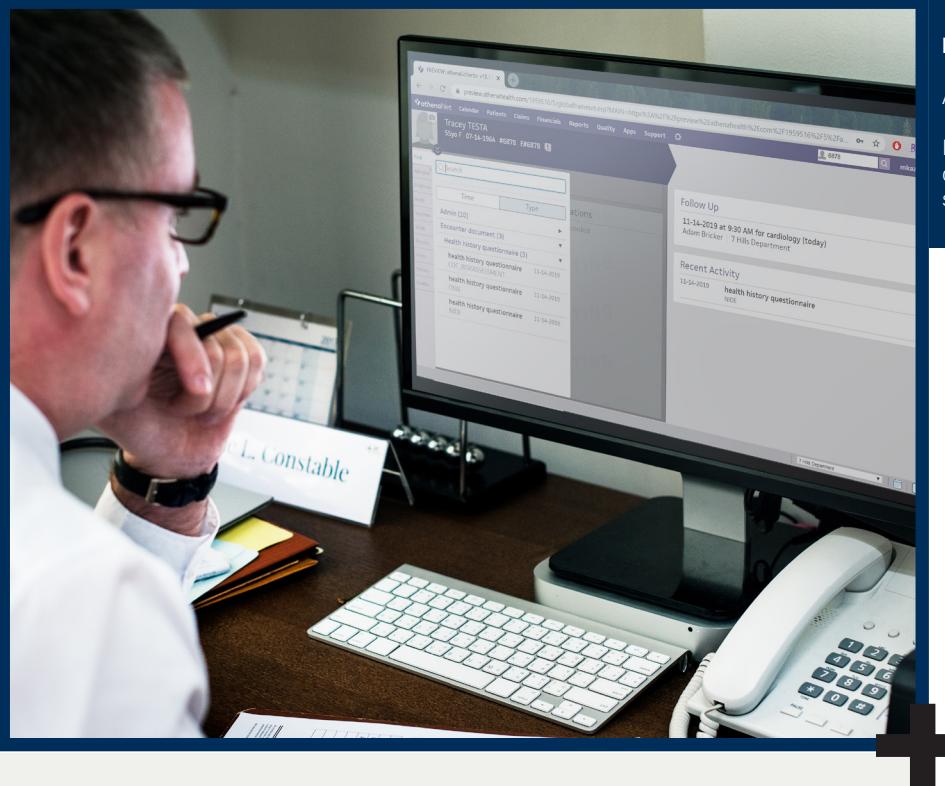

- Consent documents
- Custom screeners
- Clinical assessments
- Chief complaint
- Medical history (family, social)
- Allergies
- Medications & Vaccines

With automated billing code qualification and documentation, providers can save time and money from the standard paper process. (See Example 1 on next page)

What about security?

We provide a HITRUST certified cloud infrastructure to ensure the highest standard of data security. cliexa's patented integration services engine can bi-directionally integrate with Electronic Medical Record (EMR) systems via FHIR, HL7, File Services, Email and SMS.

Example 1:

A screener question asks the patient, **"Are you a smoker?"**

If **YES**, smoking assessment is triggered automatically, delivering appropriate documentation and compliance support to bill for that service, directly in the EMR.

What we need

Number of physicians or users
In order to assess anticipated patient volume, we require users to enter the # of providers in their practice.

Number of devices required
In order to assess device management requires, we need # of devices required. Devices include: tablets for front desk, tablets for exam rooms, and any additional devices that want to be used.

Identify a test patient for setup
For staff training purposes and to test file and data delivery
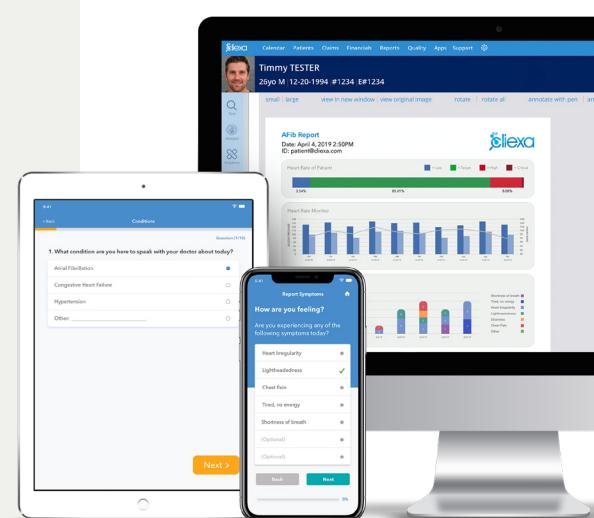

Identify a test patient department
For staff training purposes and to test file and data delivery

4 Easy Steps to Get Started

1 Click HERE to access our product or go to the athenahealth Marketplace and search for "cliexa."

2 Tap the purple "Get Started Now" button on the left-side of the page.

3 Once prompted, submit basic clinic information via the pop-up form

4 cliexa will receive a notification that you've requested more information and we will reach out to setup initial launch discussions.

Or contact our team to get help!
